

## # CPSC321Final

### Installation Guide:

#### 1. Clone the repository :

- a. <https://github.com/garyheb/CPSC321Final.git>

#### 2. Download a MySQLConnector.jar file from:

- a. <https://dev.mysql.com/downloads/connector/j/>

#### 3. Compile the SQLGenerator.js file so it generates a Teams.sql file.

- a. Execute the CreateTable.sql file in your database to create the table
- b. Run the Teams.sql file in your database to add the data for the teams.

#### 4. Create a Config.properties file:

- a. Open your IDE of choice.
- b. Right click on the project.
- c. Create a new file named config.properties.
- d. Assign host to 'cps-database.gonzaga.edu'
- e. Assign user to your corresponding username for the host.
- f. Assign password to your corresponding password for the host.

#### 4. Compile the file FinalProject.java inside the CPSC321Final folder using your favorite Java compiler.

#### 5. Run the command Java FinalProject to start the program.
